

# Societal Dimensions of Responsible Innovation for Nanotechnology

December 14, 2012

# Welcome to NACK's Webinar

## Presenter

## Barbara Herr Harthorn

Director, CNS-UCSB and Prof, UCSB  
Group co-leader, UC CEIN

# Who Are You?

- A. K-12 Educator
- B. Community College Educator
- C. 4-year College/University Educator/Researcher
- D. Industry scientist, engineer or technologist
- E. Government agency or nonprofit organization

# Outline

- What is responsible development of nanotechnology (and why should you care?)
- Will the public accept these new technologies?
- How can public participation lead to better outcomes?
- What about the experts?
- Governance challenges

# Outline

- What is responsible development of nanotechnology (and why should you care?)
- Will the public accept these new technologies?
- How can public participation lead to better outcomes?
- What about the experts?
- Governance challenges

# What is nanotechnology?

- Group of technologies using extremely small particles

# What is nanotechnology?

- Group of technologies using extremely small particles
- New and exciting characteristics and possibilities

# What is nanotechnology?

- Group of technologies using extremely small particles
- New and exciting characteristics and possibilities
- Significant number of unknown risks (health, environmental, etc.)

Not one technology but a large class of technologies across many industries

## Value Chain Branching Structure

# US National Nanotechnology Initiative NNI

Pres. Clinton on nanotech  
January 2000:

“Just imagine, materials with 10 times the strength of steel and only a fraction of the weight; shrinking all the information at the Library of Congress into a device the size of a sugar cube...”

# National Nanotechnology Initiative

- 26 federal agencies (2012)
- “...a future in which the ability to understand and control matter at the nanoscale leads to a revolution in technology and industry that benefits society”

# NNI → 4 main goals

- Advance world-class R&D program;
- foster transfer of new technologies into products *for commercial & public benefit*;
- develop and sustain educational resources, a skilled workforce, and supporting infrastructure and tools to advance nanotech; &
- *support responsible development of nanotechnology*

## **21<sup>st</sup> Century Nanotechnology R&D Act of 2003**

### **US Congress (PL 108-153)**

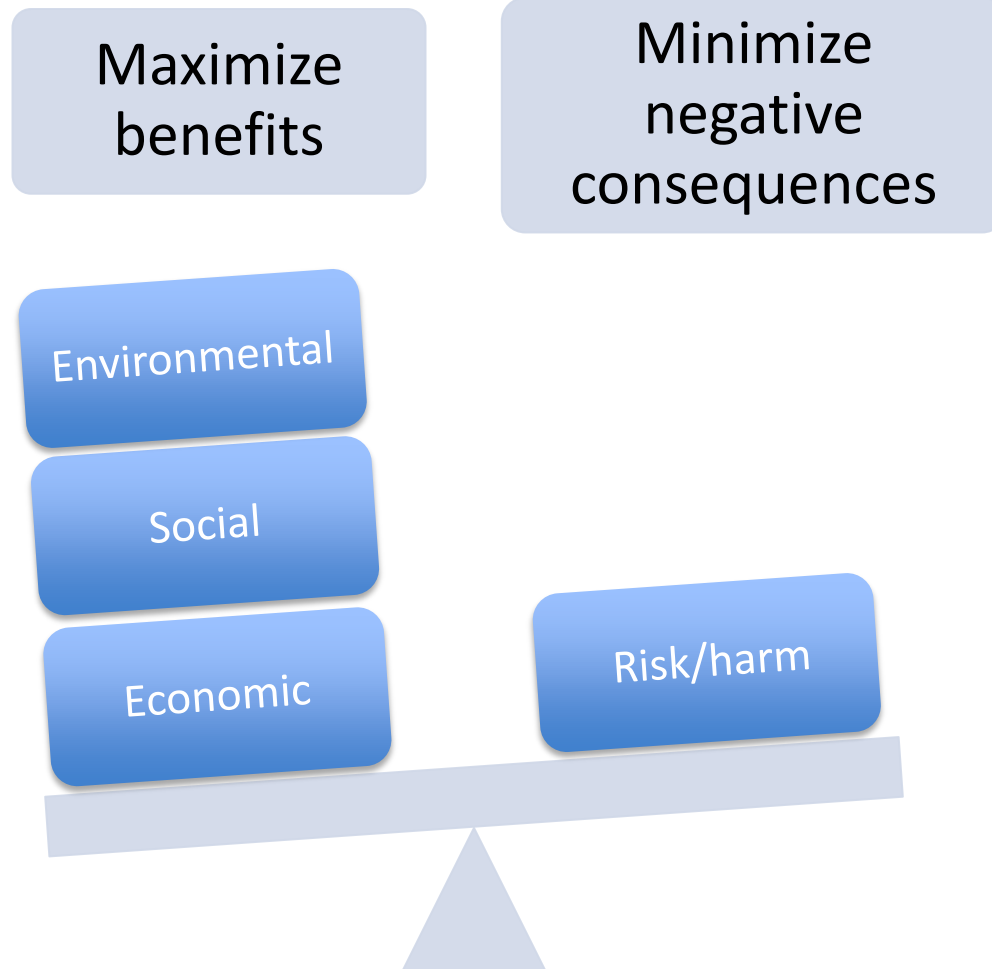

“Ensure that ethical, legal, environmental and other appropriate society concerns...are considered during the development of nanotechnology.”

- Established societal dimensions research program/centers
- Mandates public involvement in the NNI
- Requires integration of societal & EHS w/ nano R&D
- Creates ethical standard for nano development as equitable

What is meant by responsible  
development?

# Responsible development

What are societal implications of  
new technologies?

# Technology *in* Society

# Societal $\approx$ ELSI

- Ethical
- Legal
- Social
- Economic

Nano ELSI

# US National Nanotechnology Initiative, 2011

ELSI (ethical, legal, and societal implications) considerations “are deeply embedded in the NNI’s commitment to **responsible development** of nanotechnology.”

“The NNI seeks to generate ELSI knowledge and insights through:

(1) research in the areas of **public perception** and understanding expected benefits, anticipated risks, and safety that can help society assess potential impacts of nanotechnology and possible responses;

(2) **scientific meetings and workshops** at the local, state, national and international levels; and

(3) **public engagement** activities to identify stakeholder perspectives on nanoEHS and ELSI issues.”

## Ethical, Legal, and Societal Issues

Responsible development of nanotechnology is one of the four goals of the NNI and central to advancing the other three (specifically, continuing a world-class R&D program; fostering the transfer of new nanotechnologies into products for commercial and public benefit; and educating the workforce, engaging the public, and sustaining an effective nanotechnology R&D infrastructure).

An important component of responsible development is the consideration of the ethical, legal, and societal implications of nanotechnology. How nanotechnology research and applications are introduced into society; how transparent decisions are; how sensitive and responsive policies are to the needs and perceptions of the full range of stakeholders; and how ethical, legal, and social issues are addressed will determine public trust and the future of innovation driven by nanotechnology.

The NNI is committed to fostering the development of a community of experts on ethical, legal, and societal issues (ELSI) related to nanotechnology and to building collaborations among ELSI communities, such as consumers, engineers, ethicists, manufacturers, nongovernmental organizations, regulators, and scientists. These stakeholder groups will consider potential benefits and risks of research breakthroughs and provide their perspectives on new research directions. With its industry stakeholders, the NNI will also develop information resources for ethical and legal issues related to intellectual property and ethical implications of nanotechnology-based patents and trade secrets. To date, the cumulative NNI investments in education and societal dimensions totals \$350 million.

To help explore the ELSI issues, NNI agencies are supporting the two centers for nanotechnology in society noted in the "Related Resources" box, and where possible, are incorporating ELSI components into their new nanotechnology R&D

### Related Resources

The NNI has centers that focus on ELSI issues:

- [Center for Nanotechnology in Society at Arizona State University](#)
- [Center for Nanotechnology in Society at the University of California Santa Barbara](#)

### Nanotechnology and You

Benefits and Applications

Environmental, Health, and Safety Issues

✶ **Ethical, Legal, and Societal Issues**

Federal Legislation

International Engagement

Standards for Nanotechnology

# Societal benefit?

- “Moral progress” rather than just “material progress” as goal
- (*The Economist* Dec 19 2009) → social sustainability
  - Make decisions based on what is good for society
  - Support those decisions with legal and social system
- Fairness: Distributive Justice; Procedural Justice
- Informed consent of those affected: public participation, deliberation

# Determining ‘what’s good for society’

- EH&S—**essential** but not sufficient
- Assess benefit and risk perceptions of multiple stakeholders
  - Diverse publics
  - Experts
  - Industry
  - NGO, community-based organizations
- Engagement for *mutual* education and deliberation
  - CNS-UCSB ([cns.ucsb.edu](http://cns.ucsb.edu))
  - CNS-ASU ([cns.asu.edu](http://cns.asu.edu))
  - NISEnetwork ([www.nisenet.org](http://www.nisenet.org))
- Studying the future--scenarios, experimental designs
- Innovation system
- Legal/regulatory studies

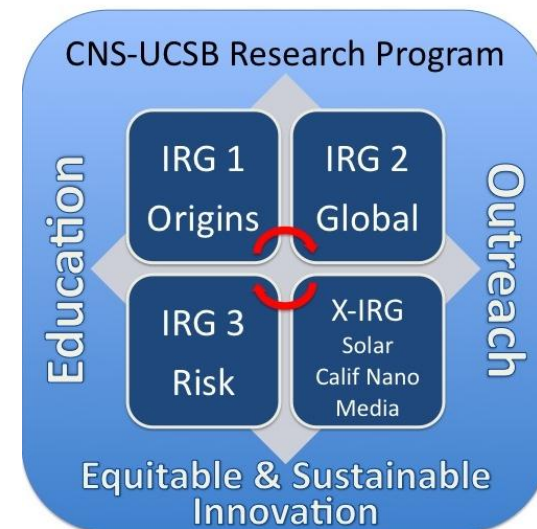

## Mission: Nanotechnology Origins, Innovations, and Perceptions in a Global Society

**CNS-UCSB challenge:** Will nanotechnology mature into a transformative technology, in our rapidly changing international economic, political & cultural environment?

- Social and environmental sustainability, 'responsible development'
- Many methods, disciplines, new approaches

### Key factors we focus on:

- Global nano-enterprise (US, Asia, Europe & Latin America)
- Multiple party risk perception
- Modes of dialogue with the public
- Historical contexts for S&T development

# NSEC/Center for Nanotechnology in Society at Arizona State University

- **Research** the societal implications of nanotechnologies
- **Train** a community of scholars with new insight into the societal dimensions of nanoscale science & engineering (NSE)
- **Engage** the public, policy makers, business leaders, and NSE researchers in dialogues about the goals and implications of NSE
- **Partner** with NSE laboratories to introduce greater reflexiveness in the R&D process

## Center for the Environmental Implications of NanoTechnology

The **Center for the Environmental Implications of NanoTechnology (CEINT)** is exploring the relationship between a vast array of nanomaterials— from natural, to manufactured, to those produced incidentally by human activities— and their potential environmental exposure, biological effects, and ecological impacts. Headquartered at Duke University, CEINT is a collaborative effort bringing together researchers from Duke, Carnegie Mellon University, Howard University, Virginia Tech, University of Kentucky, and Stanford University. CEINT academic collaborations include on-going activities coordinated with faculty at Baylor, Clemson, North Carolina State, and North Carolina Central universities, with researchers at NIST and EPA government labs, and with key international partners.

Created in 2008 with funding from the National Science Foundation and the US Environmental Protection Agency, CEINT performs fundamental research on the behavior of nano-scale materials in laboratory and complex ecosystems. Research includes all aspects of nanomaterial transport, fate and exposure, as well as ecotoxicological and ecosystem impacts. Additionally, CEINT is developing risk assessment tools to provide guidance in assessing existing and future concerns surrounding the environmental implications of nanomaterials.

## Upcoming Events

December 13, 2012

Seminar: Menachem Elimelech

# Outline

- What is responsible development of nanotechnology (and why should you care?)
- Will the public accept these new technologies?
- How can public participation lead to better outcomes?
- What about the experts?
- Governance challenges

# How aware are the public of nano? and how do they view nanotechnology's benefits and risks?

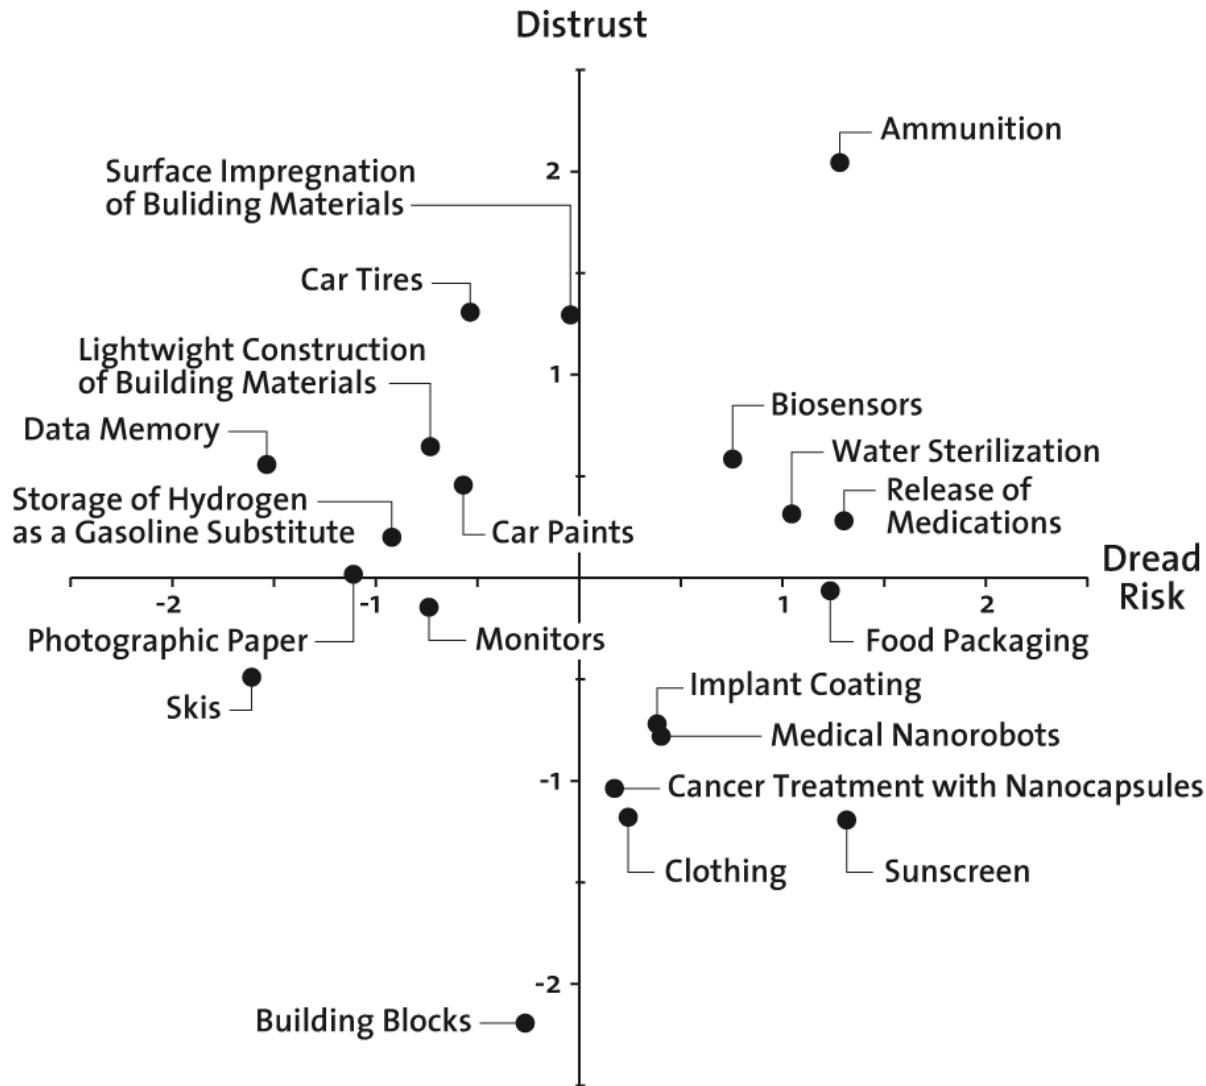

CNS-UCSB quantitative meta-analysis of 17 published surveys in 22 papers in US, Canada, Europe, Japan, 2002-2008

Satterfield, Kandlikar, Beaudrie, Conti & Harthorn, 2009. *Nature Nanotechnology* 4: 752-758.

Source: Siegrist et al, 2007, *Risk Analysis*, v27, 59-70, n=375

# Application Matters: Cross-National US-UK Energy-Health Deliberation of Nanotechnologies

1. Benefits Rather than Risks Continue to Frame Nano Risk Perception
2. Cross-Cultural Differences: subtle and contextual
3. Different Application: Different Perceptions: Energy vs. Health applications
4. The Social Trumps the Technological in the Discussion of 'Risk'

Pidgeon, N., Harthorn, B., Bryant, K. & Rogers-Hayden, T. 2009.  
*Nature Nanotechnology* 4 (2): 95-98.

Interaction of  
US public  
nanotech  
benefit & risk  
perceptions

Willing to purchase?

Source: Currall et al. 2006, *Nature Nanotechnology* 1:153-155

# Purchase Of Food Enhanced With Nanotechnology

I would purchase food enhanced with nanotechnology

7%

I need more information about health risks and benefits to purchase food enhanced with nanotechnology

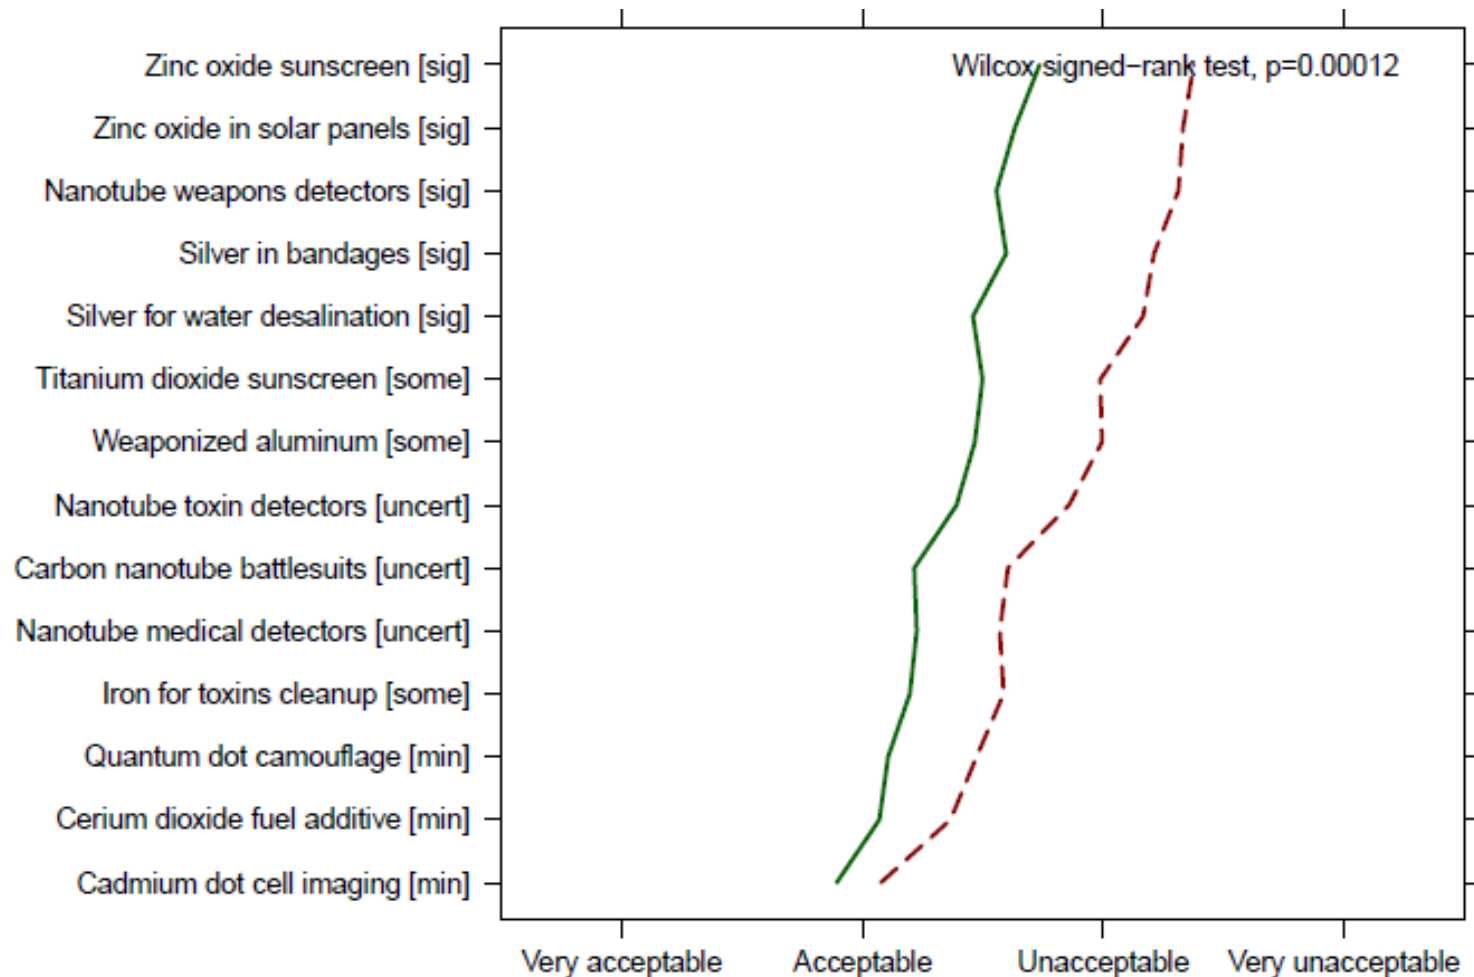

62%

I would NOT purchase food enhanced with nanotechnology

29%

# Public Perception of ENM Environmental Risk: Shaped by Risk Messages & Environmental Values

**Green:** Air/water/soil recover easily, self clean, mostly pure & controllable.

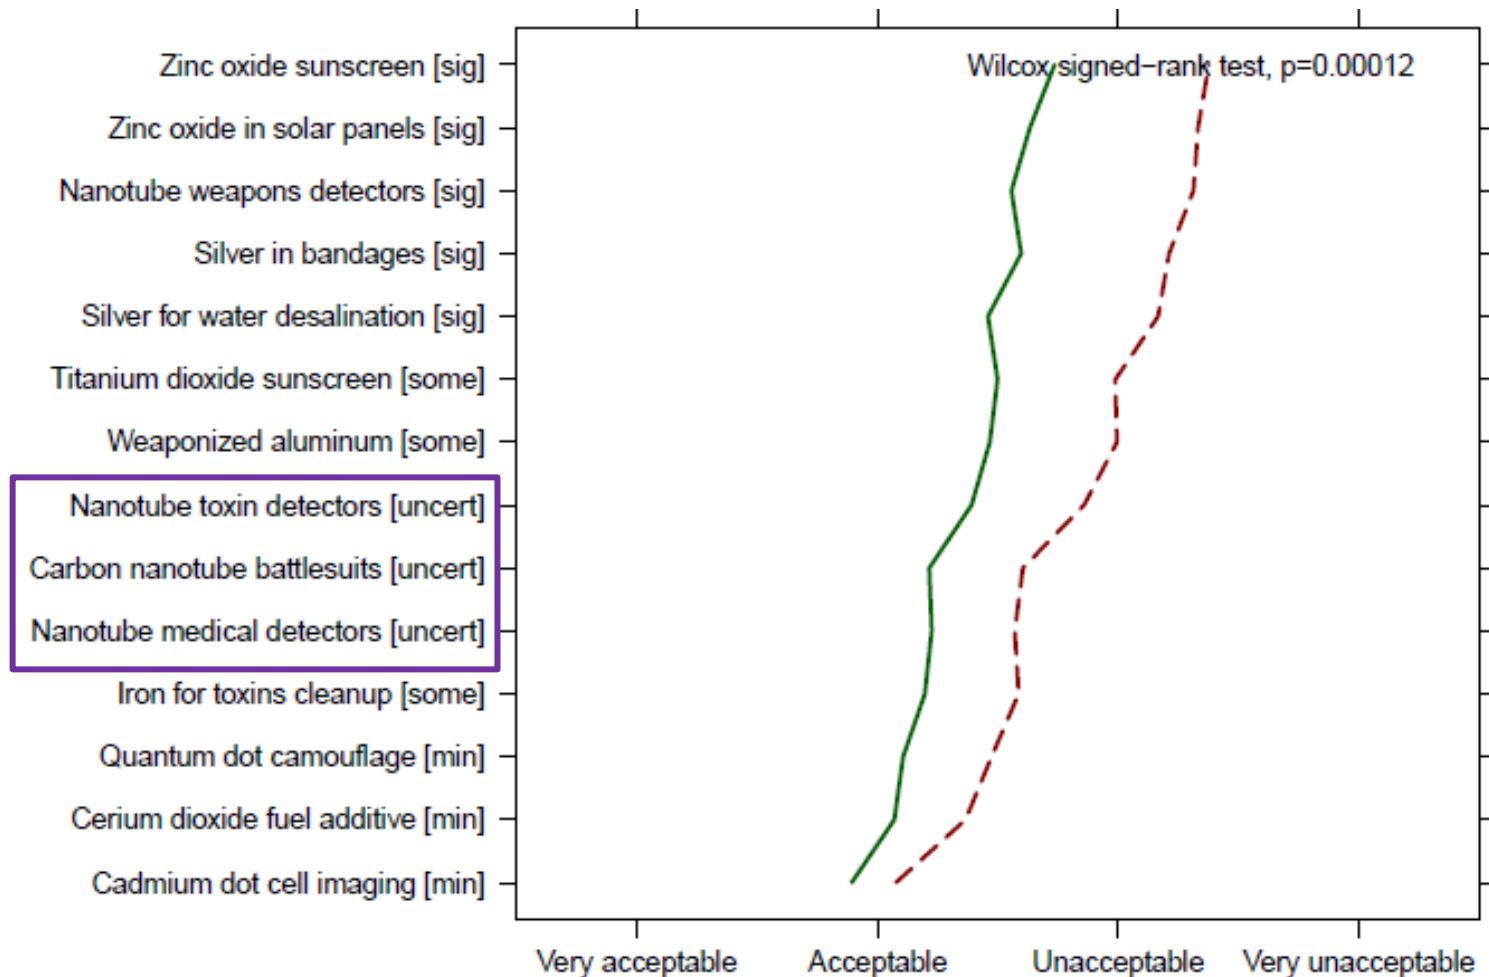

**Red:** Air/water/soil recover poorly, need human intervention to become clean, are mostly contaminated and difficult to control.

# Environmental risk perception

- Stated risk level affects acceptability
- Perceived environmental ‘resilience’  
(environmental values) affect acceptability

# Public Perception of ENM Environmental Risk: Shaped by Risk Messages & Environmental Values

**Purple:** Uncertain risks – reluctant to judge

# Environmental risk perception

- Risk uncertainty -- reluctant to judge at all  
(need for information)

## Trust Asymmetry in the Nanotech Case

Source: Satterfield et al. 2012 (US national survey, n = 1100)

# Importance of Trust

Linked to regulation

“When it comes to nanotechnology, I would trust a system that has, using the car as an analogy, a brake as well as an accelerator. ... The accelerator works just great now as far as I can tell from reading things that you brought, from talking with the experts, *I’m much less convinced that there’s a braking mechanism.*”

CNS-UCSB US Health deliberation workshops, Feb 2007,  
male respondent; italics added

S. GROSS

*"My next big project is brakes."*

# What has the media had to say about nano?

## 'Nano pit' technique to extend life of hip replacements

By Ken Macdonald  
BBC Scotland Science Correspondent

A Scottish team of biologists, nanoengineers and surgeons has come up with a new technique which could mean hip replacements that last a lifetime.

The researchers want to coat key surfaces with a "nanopattern" pitted plastic to encourage stem cells to form bone in contact with the new joint.

The system aims to combat problems with the body forming soft tissues around hip replacements.

## Nanotechnology: Armed resistance

Nature assesses the aftermath of a series of nanotechnology-lab bombings in Mexico — and asks how the country became a target of eco-anarchists.

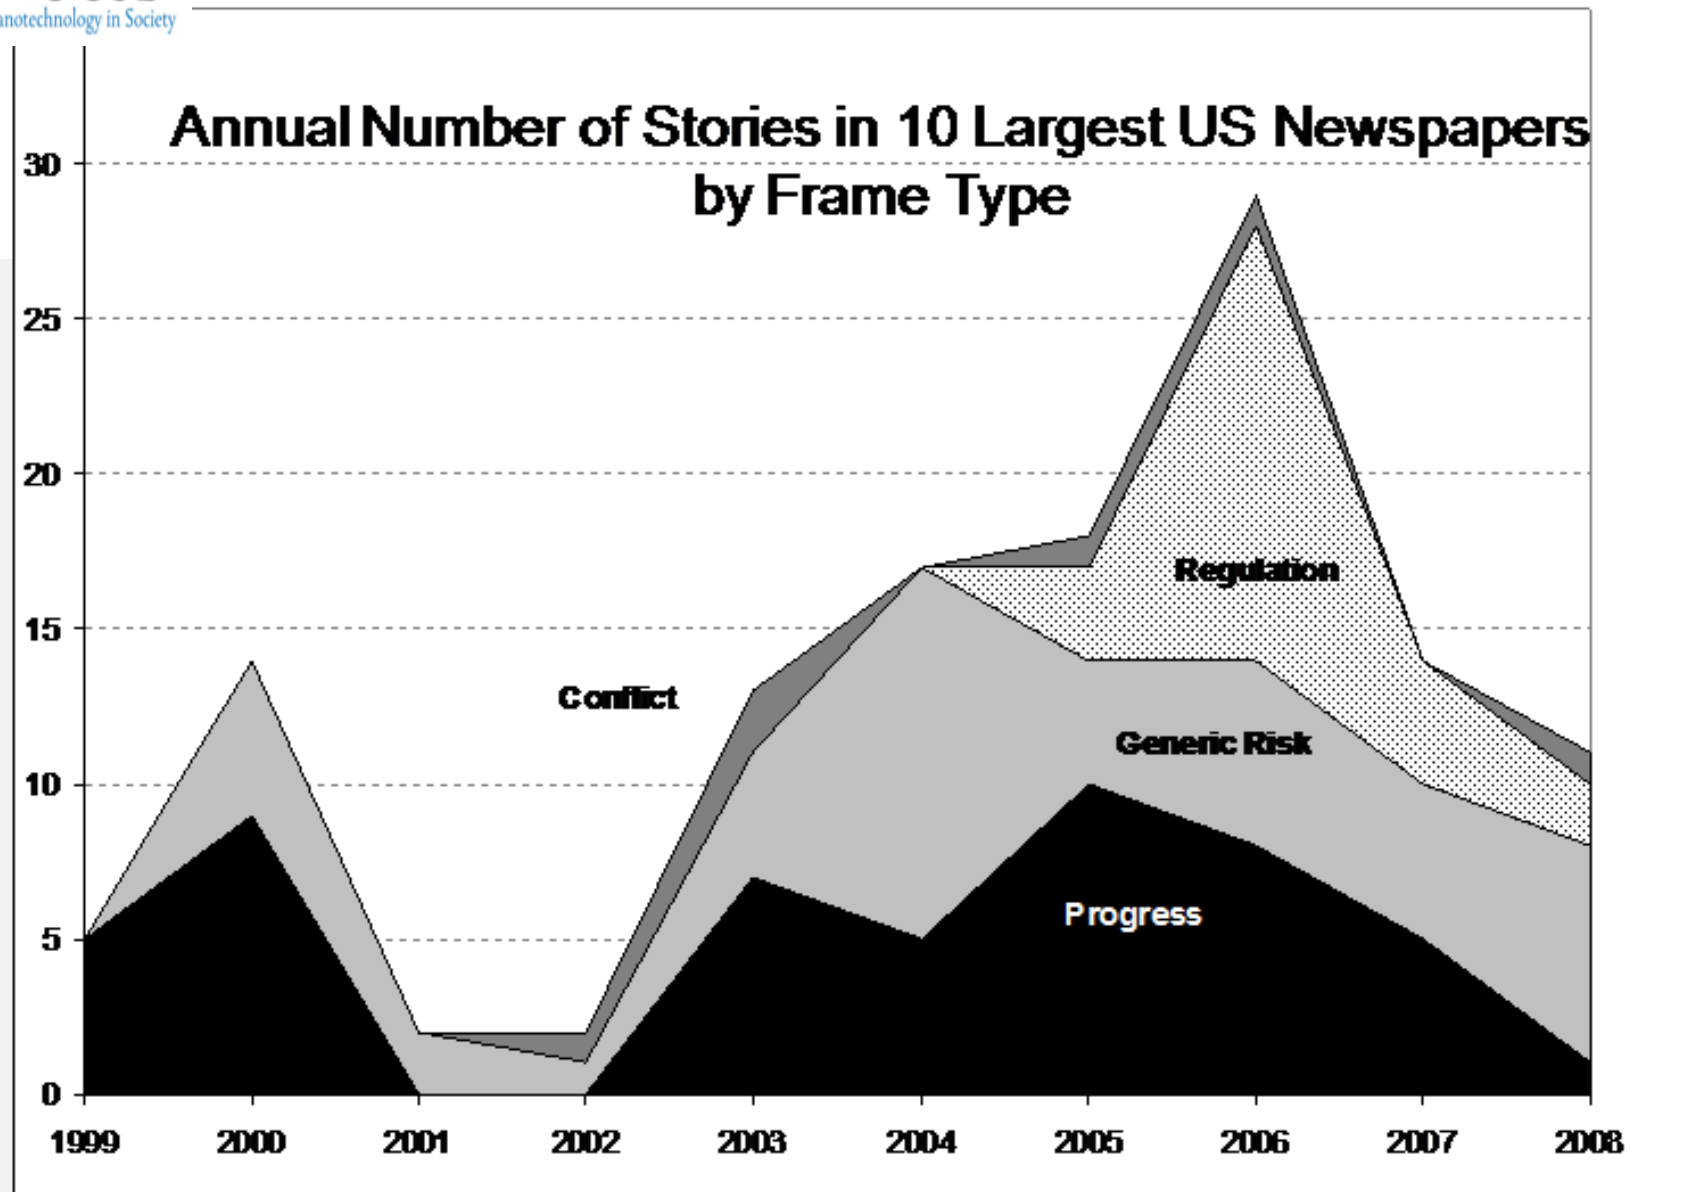

Leigh Phillips

29 August 2012 | Corrected: 05 September 2012

Under attack: policemen stand guard outside the Monterrey Institute of Technology and Higher Education after a letter bomb exploded there in August 2011.

A. FRANCO/AP/PRESS ASSOCIATION IMAGES

Weaver, D., Lively, B., & Bimber, B. 2009. Search for a Frame: News Media Tell the Story of Technological Progress, Risk, and Regulation. *Science Communication* 131(2): 139-166.

# Public perceptions of benefits & risks of new technology

- Benefits predominate thus far—what will constrain (other than EHS)? Views are contingent on:
  - Publics' low familiarity/unformed views
  - High uncertainty/need for information
  - Media coverage low & mixed message
  - Inequality/social justice key
  - Trust or betrayal by government, industry?
  - Application-specific views
  - Environmental values (resilience); intuitive toxicology
  - Gender, race, other social differences (next up)

# Outline

- What is responsible development of nanotechnology (and why should you care?)
- Will the public accept these new technologies?
- How can public participation lead to better outcomes?
- What about the experts?
- Governance challenges

# Engaging diverse publics: Part of much broader 'deliberative turn' in US and abroad

NRC: Stern & Fineberg (1996)

NRC: Dietz & Stern (2008)

# Why public participation in governance?

- Should Technology Assessment be participatory?
  - Right thing to do—those affected should share in decision-making (see *21<sup>st</sup> Century Nanotech R&D Act*)
  - Useful thing to do--equitability and substantive input are good for outcomes

# Key aspects of successful public participation

## Aims:

- addresses needs and concerns of publics
- reduces mistrust between stakeholders
- results in all participants (including scientists) being better informed about both the issues *and* about one another

# Key aspects of successful public participation

## Aims:

- addresses needs and concerns of publics
- reduces mistrust between stakeholders
- results in all participants (including scientists) being better informed about both the issues *and* about one another

## Key features:

- Two-way *dialogue*
- “early and often”
- procedural fairness
- well managed process
- implementation that includes breadth, intensity, and integration of scientific expertise

# Gendered aspects of talk in US nano deliberation

- Men speak more than women and use more intrusive interruptions in deliberations on nano
- Whites use more intrusive interruptions than people of color
- Women speak more, use more backchannels/cooperative overlaps, and use more self-disclosure when discussing ***health and human enhancement applications vs. energy/environment applications***
- Men's patterns of talk do not vary across applications

***Implications:*** subtle and overt group dynamics play a major role in deliberative settings, largely unexamined thus far

# Outline

- What is responsible development of nanotechnology (and why should you care?)
- Will the public accept these new technologies?
- How can public participation lead to better outcomes?
- **What about the experts?**
- Governance challenges

**a**

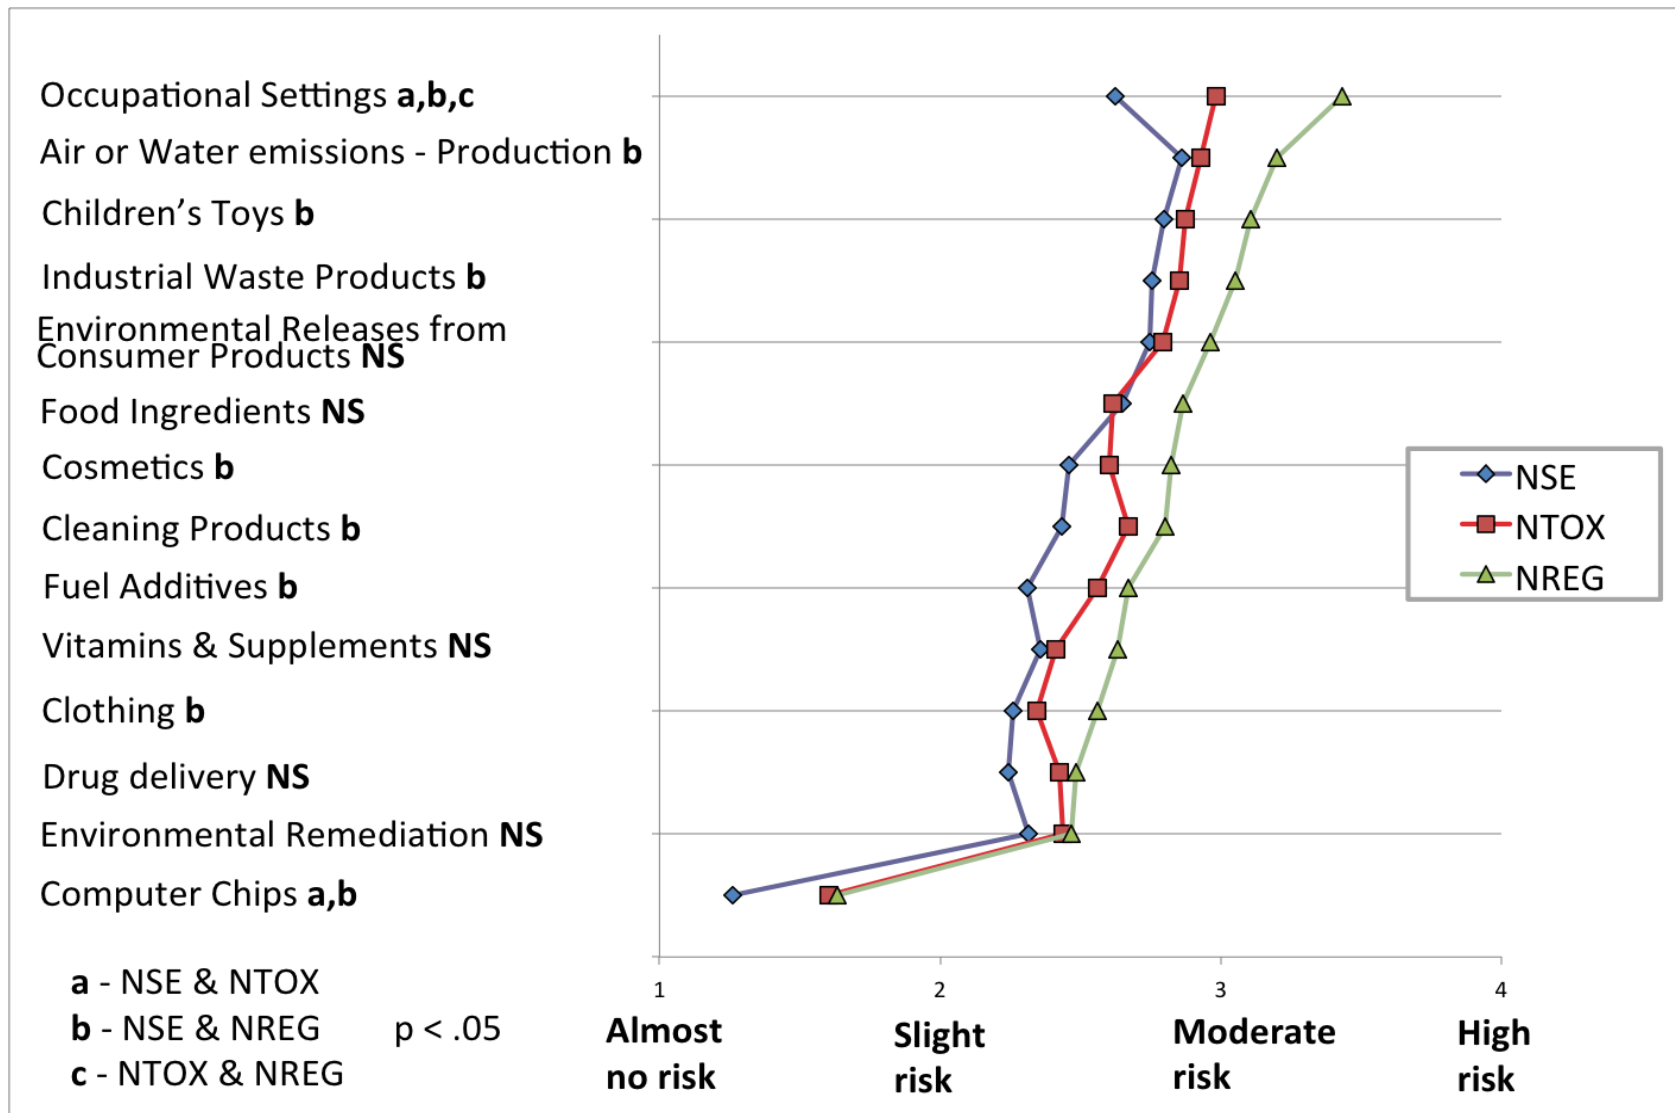

Scientists are more optimistic than the public about potential benefits

**b**

Scientists are less concerned about risks other than environment & health

Source: Scheufele et al. 2007 *Nature Nano*

# Scientists' and Regulators' ENM Risk and Benefit Perceptions— Small but Consistent Differences

# Expert Judgments

- Small but significant differences in risk views by expert affiliation/discipline, with ***regulators judging risks to be higher***
- Greatest disagreement in views about ***workplace risk***
- Most agreement about ***nano-remediation***

# Industry Risk Perception—International Survey of Private Nanomaterials Companies

Phone & web survey of 78 companies in 14 countries; US oversample

DBI-0830117

# Industry judgments

- Large majority of industry leaders are **uncertain or show moderate/high perceived risk** re: ENMs, combined 'don't know' plus moderate/high risk = 64%(metal oxides) - 83% (quantum dots)
- yet *not* self protective
- and prefer autonomy from regulation

# Outline

- What is responsible development of nanotechnology (and why should you care?)
- Will the public accept these new technologies?
- How can public participation lead to better outcomes?
- What about the experts?
- Governance challenges

SIPRESS

*"How am I supposed to think about consequences before they happen?"*

# The Strategic Vision

## Anticipatory Governance

### 1. Foresight

- All governance requires a disposition toward future

### 2. Engagement

- Crucial normatively, strategically, pragmatically

### 3. Integration

- Scientists know things we don't, and vice versa

### 4. Ensemble-ization

- Because none of these works in isolation

# Governance & Regulatory Issues

- EH&S (Env Health & Safety)
  - Safeguard environment (UC CEIN & CEINT)
  - Ensure human health and safety
- Standards, nomenclature, tools
- Protecting intellectual property
- Societal—anticipatory governance
  - Socially disruptive technologies
  - Unanticipated consequences

# Comparative Lessons re: Longer-Range Governance Questions

- Risks *beyond EHS/toxicity*:
  - Surveillance and civil liberties
  - Lack of trust over responsible governance
  - Profound lack of trust of industry
  - Human enhancement and impacts upon identity
  - Equity of access and exposure to harm big issues for *health technologies*
  - *Energy technologies* perceived as so urgent, people not at all sensitive to risks (new in our nano work?)
  - Military developments? (not raised in our delibs in US or UK)

# Outline

- What is responsible development of nanotechnology (and why should you care?)
- Will the public accept these new technologies?
- How can public participation lead to better outcomes?
- What about the experts?
- Governance challenges

# Societal Aspects of Responsible Development

- NNI's support of societal research is generating new knowledge about upstream perceptions and attitudes, among publics and experts
- Public participation is essential to nano governance
- New mechanisms for integration of science/society (CNS-UCSB, CNS-ASU)
- Knowledge and resources: yes
- Will to pursue??

# Thank you.

- Many people to acknowledge: *Faculty researchers*: Nick Pidgeon, Terre Satterfield: Edwina Barvosa, Bruce Bimber, Karl Bryant, Joseph Conti, Sharon Friedman, Patricia Holden, Milind Kandlikar; *postdocs*: Mary Collins, Adam Corner, Gwen D'Arcangelis, Anton Pitts, Jennifer Rogers, and Christine Shearer; *grads*: Christian Beaudrie, Rachel Cranfill, Amanda Denes, Laura DeVries, Cassandra Engeman, Shannon Hanna, Indy Hurt, Tyronne Martin, David Weaver; undergrad: Julie Whirlow.
- This work is funded by NSF through cooperative agreements # SES 0531184 and #0938099 to the Center for Nanotechnology in Society at UCSB; and grant # SES-0824024 to PI Harthorn. Also funded by NSF & EPA through cooperative agreement #DBI 0830117 to the UC Center for Environmental Implications of Nanotechnology. Views expressed here are those of the author and do not necessarily reflect the views of the NSF or EPA.
